THANANJAYAN ARULJOTHY

SOFTWARE ENGINEER | PYTHON, AI/LLM APPLICATIONS & AI VIDEO/IMAGE GENERATION

Sri Lanka | Open to Fully Remote or Hybrid | +94 77 844 9255 | thananjayan1991@yahoo.com | GitHub: github.com/Thananjayan91 | LinkedIn: linkedin.com/in/thananjayan-aruljothy | Trailblazer: salesforce.com/trailblazer/taruljothy

ABOUT ME

Software Engineer with 3+ years of experience spanning backend development (Python/Flask), AI/LLM application integration (OpenAI, Anthropic Claude, Google Gemini/Vertex AI), and AI video/image generation engineering (Google Veo, Kling, character-consistent generation pipelines). Background also includes prior operational experience in logistics and ERP systems (SAP), giving practical exposure to business processes alongside technical skills. Comfortable working independently, picking up new tools and platforms quickly, and delivering features end to end.

Expected Position: Software Engineer / Python Developer / AI Engineer / Backend Developer / AI Automation Engineer (open to related titles)

Work Model: Open to fully remote or hybrid arrangements

Location: Sri Lanka (available for remote roles globally; hybrid roles within reasonable travel range)

Availability: Immediate / short notice

CORE SKILLS

Programming & Backend: Python, Flask, JavaScript, RESTful APIs, SQL, JSON, XML

AI & LLM Applications: OpenAI, Anthropic Claude, Google Gemini, Vertex AI — prompt engineering, structured output, RAG (Retrieval-Augmented Generation)

AI Video & Image Generation: Google Veo, Kling — image-to-video generation, character/scene consistency, multimodal visual prompting

Video Editing & Rendering: Custom web-based video editor (trim, cut, colour grading, animations), Puppeteer + FFmpeg automated rendering, DaVinci Resolve

AI-Assisted Development: Claude Code — fluent daily use for coding, debugging, and testing

Frontend: Fabric.js, HTML, CSS, JavaScript, Three.js

Cloud & Infrastructure: AWS EC2, Linux/Ubuntu Server, Windows Server

Version Control: Git, GitHub

Salesforce (Trailhead): 126 badges, 23 trails, 10 Superbadges — Flow automation, approval processes, security/authentication (MFA/SSO), app customization

Business & Domain Background: ERP systems (SAP), logistics operations, transportation planning, cross-functional coordination

PROFESSIONAL EXPERIENCE

AI Full Stack Engineer — Flipick (India — Remote) | *Apr 2023 – Present*

- Built a full-form AI video generation pipeline: concept → AI-generated characters, locations, and properties → multi-shot storyboards with lighting-aware prompts → shot images → 8-second AI video clips (Google Veo, Kling) → merged final cut.
- Solved character consistency as the core technical challenge — allowing users to generate or upload a character and reuse it consistently across different locations, shots, and generated video clips.
- Built a custom in-app video editor (trim, colour grading, animations) rather than relying on third-party editing tools, producing a final rendered MP4.
- Design and implement LLM-powered application features using OpenAI, Anthropic Claude, and Google Gemini/Vertex AI, including prompt engineering, structured output, and retrieval-augmented generation (RAG).
- Build backend APIs and data pipelines using Python and Flask, connecting applications with AI services and third-party systems.
- Use Claude Code daily as part of development workflow for coding, debugging, and testing.
- Deploy and maintain applications on AWS EC2 and Linux environments.

Associate Software Engineer — Eureka Innovations | *Jan 2022 – Apr 2022*

- Developed web application features and interactive interfaces using JavaScript and Three.js.

- Contributed to AI-enabled EdTech products including Brainiverse and Xtramark.
- Worked on frontend, backend integration and application functionality.

Junior Web Developer — KoceanSoft | *Apr 2022 – Nov 2022*

- Developed and customized websites using HTML, CSS, JavaScript and WordPress.
- Worked with Firebase configuration and backend integrations.
- Implemented website improvements and basic SEO optimization.

Logistics Officer — INSEE Cement | *Apr 2016 – Oct 2019*

- Managed logistics operations, ERP-based (SAP) order processing, deliveries, invoicing, and operational reporting.
- Coordinated with internal teams and external transportation partners to plan and execute delivery schedules.
- Supported transportation planning and operational efficiency improvements.

SELECTED PROJECTS

AI Cinematic Video Generation & Editing Platform

- Built a full-form AI video generation application: from a concept, the system generates characters, locations, and properties, then produces multiple shot storyboards with lighting-aware prompts.
- Implemented character generation and upload — users can create a new AI character or upload their own, then reuse that character consistently across locations and shots.
- Sent shot images and prompts to Google Veo and Kling to generate 8-second video clips per shot, then merged the resulting shot videos into a single sequence.
- Built a custom in-app video editor for trimming, colour grading, adding animations, and assembling shots into a final rendered MP4.

Portfolio / Sample Work: Project Folder 1

Sample Output Videos: Project Folder 2

AI RAG Knowledge Base | *Python / LLM / RAG*

- Built a document-based AI knowledge assistant — document ingestion, chunking, retrieval, and structured LLM-driven question-answering.

EDUCATION

Bachelor of Information Technology (BIT) — University of Colombo, UCSC | 2020 – 2023

BSc Transport & Logistics Management — University of Moratuwa | 2011 – 2016

ADDITIONAL LEARNING

- Currently learning n8n for building automation-platform-driven workflows.
- Exploring multi-agent orchestration concepts and broader AI video generation tools (Runway, Luma) beyond current Veo/Kling experience.
- Continuing Salesforce Trailhead learning and working toward Salesforce Administrator Certification.
